

What contractors need to know when picking **QUALITY PRODUCTS FOR BATHROOMS RENOVATIONS.**

If you're a contractor, there's no way around it: The products you use could help or hinder your chances of finding more work. Even if you are one of the top contractors in your area, if you're choosing to work with low-quality material, your clients will be faced with the aftermath of any defects, chips, cracks, discolouring and potential mould and mildew problems.

Because businesses rely on word-of-mouth from friends, family and online reviews, having even one piece of bad criticism due to poor-quality materials could cost you valuable potential business.

To make sure your reviews are positive and your customers are happy, it makes the most sense to invest in top notch material.

Longevity Acrylics 100 percent cast acrylic showers and tubshowers are worthy long-term investments. Resistant to damage and discolouration, our acrylic bathware is available in multiple colors and keeps its original gloss years after being installed.

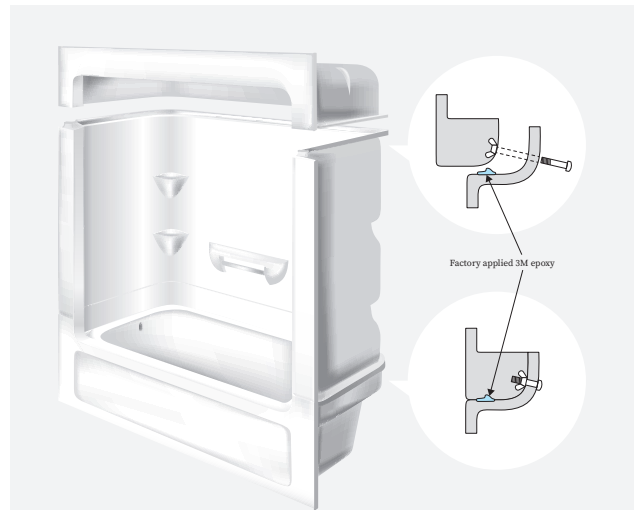

Our 2 and 3 piece modular bathware products incorporate the industry's only Leak Proof Joint System. With a unique, smooth, acrylic on acrylic joint it's the only joint system available that eliminates water leakage and requires no silicone in the joint. With no silicone required there is less chance of mould and mildew build up in the joint which can occur when silicone is used.

Only stainless steel hardware is used, and we back our units with the best warranty in the business – Lifetime Warranty.

Your business depends on your investment in high-quality materials in bathroom remodeling projects. It will help keep your current customers happy and increase the number of new referrals coming your way.
